Old  
11%

Working  
62%

Young  
27%

# Finland and Israel Demographics

**What to do?**

# ❖ Encourage larger families

# ❖ Encourage Technological Entrepreneurship

# What is Technological Entrepreneurship

There are many detailed and complex definitions

I have chosen the most simple one –

**Establishment of a new  
technology venture**

# **Technological Entrepreneurship – Key to World Peace and Prosperity**

**Why is Technological  
Entrepreneurship  
important for the well being  
of societies, countries and  
the world?**

**Building sustainable economy requires  
development of human ingenuity**

**How can we do that?**

**No corruption**

**Free market economy**

**Government policy and support**

**Good engineering and science education**

**Good basic education to all**

**But that may not be enough**

**Also needed is**

**Development of entrepreneurial  
spirit and knowledge**

# Born to be technological entrepreneurs?

- ❖ Some say that to become a successful entrepreneur one has to be “born with it”
- ❖ Not so.
- ❖ While it is true that home environment can affect ideas, mentality and self-efficacy, it is also true that proper teaching can direct attention to a worthy subject and good mentor can inspire enthusiastic followers.

**Can we teach technological  
entrepreneurship?**

**Yes, we can and we should!**

**Who teaches entrepreneurship today?**

**Universities around the world**

**How?**

**Startups management in MBA programs.**

**Problem is - MBA startup managers do not usually open new high-tech startups.**

**So who opens startups?**

**It is the engineers, biologists, MDs, scientists and computer experts that start new High-Tech companies.**

# Who should teach technological entrepreneurship

- ❖ And so, in addition to teaching startup management it is a good idea to motivate and teach future entrepreneurs how to open successful startups
- ❖ Future entrepreneurs are students of engineering, biology, physics, chemistry, computer science MDs and related subjects.

❖ Universities should expose and motivate these students to consider opening hi-tech business of their own.

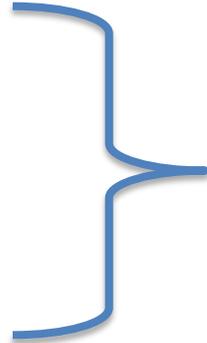

# Whom and where should we teach

❖ Youth – in high schools

❖ Engineers

❖ Scientists

❖ MDs

in universities

❖ Technicians – in vocational school

# Technological Entrepreneurship – the Technion class

28 years ago I started a  
Technological Entrepreneurship class  
at the Technion. It is still running today.

How does the class work?

- ❖ Open to all Technion students
- ❖ 300-600 students in the class
- ❖ All lectures by invited speakers
  - successful entrepreneurs
  - new startup entrepreneurs
  - professionals

**An invited speaker-entrepreneur should provide tips, tell stories and give advice from his/her experience.**

These entrepreneurs are **role models** to follow. If the audience can identify with the speaker, can believe that they can follow his or her footsteps and become success story, we have achieved our goal.

# What can an experienced invited entrepreneur talk about?

- ❖ How he started
- ❖ Difficulties he faced and ways he overcame them
- ❖ What were the financial resources
- ❖ How he found proper partners
- ❖ How he found customers
- ❖ What is the company culture

# Motivation

The motivation should be the startup itself.  
Not money.

Money is a byproduct of a successful  
business

# Mistakes that lead to failure of startups

- ❖ Nonprofessional management by the technological entrepreneur
- ❖ Insufficient market survey and lack of market knowledge
- ❖ Wrong money sources
- ❖ Partnering with friends rather than professionals
- ❖ Ego driven entrepreneurship – “I know best”
- ❖ Bad contract among founders

# Cultural considerations

Fear of failure

Our message is -

**Failure - OK**

**Start again!**

# Intrapreneurship

## Early science education

# Government role

- ❖ Incubators
- ❖ Partnership with VC funds
- ❖ Form a chief scientist office in every ministry
- ❖ Support industrial innovative R&D in startups
- ❖ Sign binational agreements and support binational funds
- ❖ Form and support instruction and advice centers for immemerging startups.

# Money

**Not all money is the same**

# So, where should we go to seek funding for our startup

- ❖ Angels
- ❖ Strategic partners
- ❖ Bootstrapping
- ❖ VC funds

# What money should not be used

- ❖ If you do not have deep pockets do not use your own money
- ❖ Do not take money from relatives or friends

# VC funds - a good or bad source of funding?

- ❖ How does a venture capital fund work?
- ❖ What are the problems with VC funds

# Exits

**israel**

**2012 – \$5.5 Billion**

**2013 – \$7.6. Billion**

**2014 - \$15 Billion**

**So, exit is good or bad?**

## START-UP NATION

addresses the trillion dollar question: How is it that Israel - a country of 7.9 million, only 64 years old, surrounded by enemies, in a constant state of war since its founding, with no natural resources-- produces more start-up companies than large, peaceful, and stable nations like Japan, China, India, Korea, Canada and the UK?

**Thank you**
